

## Now that your pet has had their vaccination...

Congratulations on giving your pet the immunization they need to live a happy, healthy life. Although they may be a little sore at first, most pets will be fine after receiving their shot. However, as with any vaccination, there's always a chance for your pet to experience one or more mild side effects. Contact your veterinarian right away if you notice any of these side effects lasting longer than a few days.

### Common side effects post-vaccination:

- Quietness
- Tiredness
- Lack of appetite
- Tenderness at injection site
- Small lump or bump at injection site
- Sneezing  
*(after intra-nasal vaccines)*

### Less common side effects that require immediate medical attention:

- Vomiting
- Diarrhea
- Hives
- Facial swelling
